Spirituality within Computing

Headteacher - Mr J Atherton

Computing Lead - Mrs E Fairclough

Spirituality within Computing at Leyland St. James' CE Primary School

At Leyland St James' Primary School, computing and spirituality are linked by encouraging children to use technology thoughtfully and responsibly, reflecting on how it can help them connect, create, and solve problems in positive ways. Through computing lessons, pupils learn not only practical skills but also the importance of kindness, respect, and using technology to make a difference in their community. This mindful approach helps children see the role of technology as a tool to express creativity and care for others, supporting their spiritual growth alongside their digital understanding. Through activities such as coding and digital creativity children can express their spiritual and expressive dimensions. Computing also gives our children the opportunity to experience awe and wonder and ask big questions about the place of technology in society.
